Sales Data Analysis

Key findings from 10 orders across Jan–Mar 2026

Prepared by: Gideon | Source: sales_data.csv

Summary

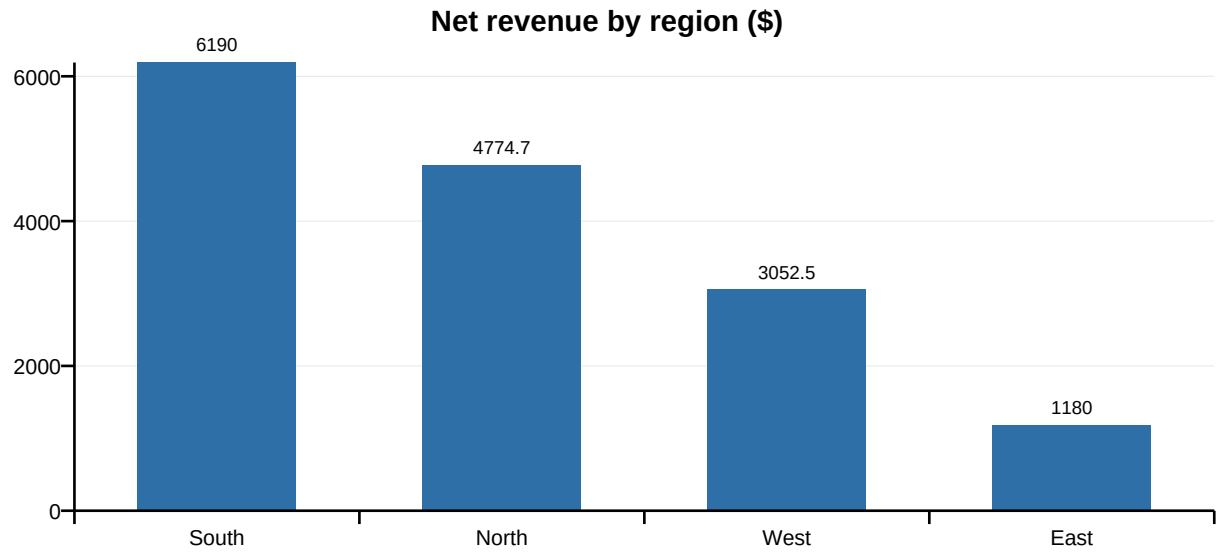
The dataset covers 10 orders, 179 units, and $15,197 in net revenue across four regions and three categories. Electronics drives the business: it's a minority of units sold but the large majority of revenue, led by a single high-value Laptop line. South is the top region and February was the strongest month.

Key takeaway

Electronics generates 75% of revenue ($11,346) from just 36 units, while Stationery sells the most units (130) but contributes only 5% of revenue ($700) — the two categories serve very different roles.

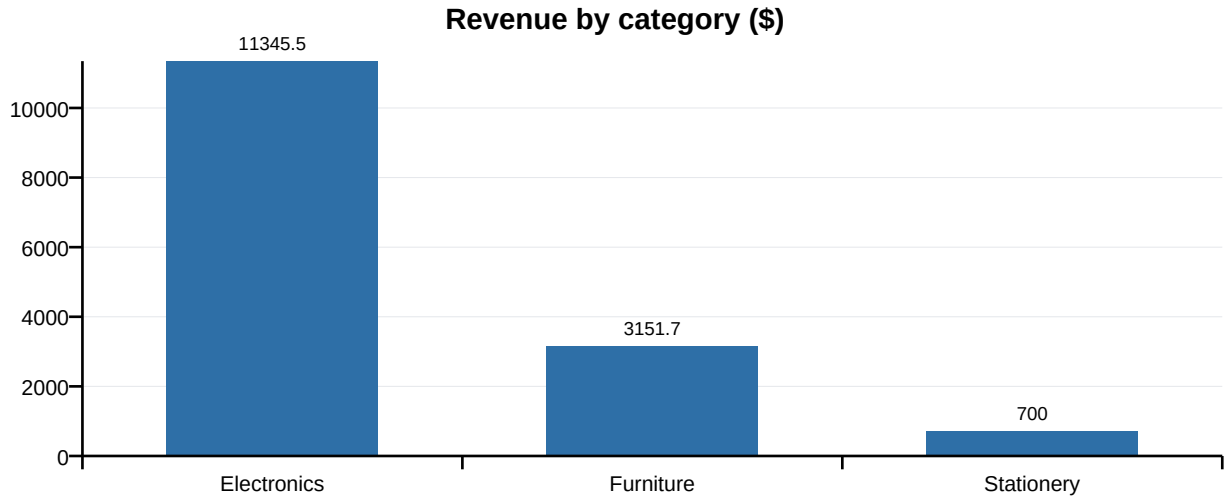
Total revenue	Units sold	Avg. customer rating	Avg. discount
$15,197	**179**	**4.09 / 5** GREEN	**8.5%** YELLOW

Revenue by region



South leads with $6,190 (41% of total), more than double East's $1,180. North and West sit in between. One order per region-category combo means these totals are sensitive to individual large orders (e.g. South's Laptop sale).

Revenue vs. units by category

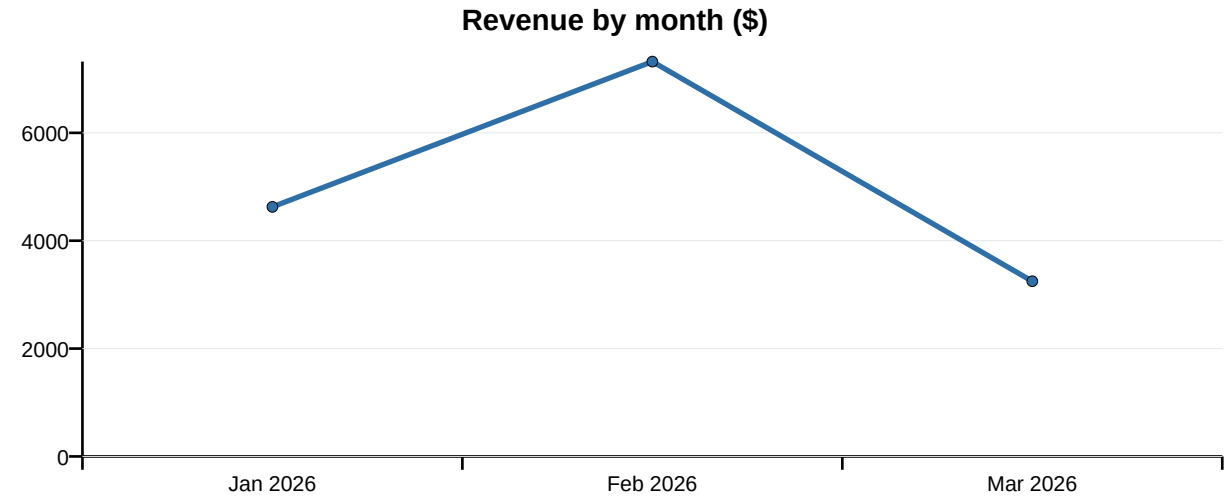


Category	Revenue	Units sold	Avg. rating
Electronics	$11,345.50	36	4.34
Furniture	$3,151.70	13	4.03
Stationery	$700.00	130	3.55

Electronics is the quality + revenue leader

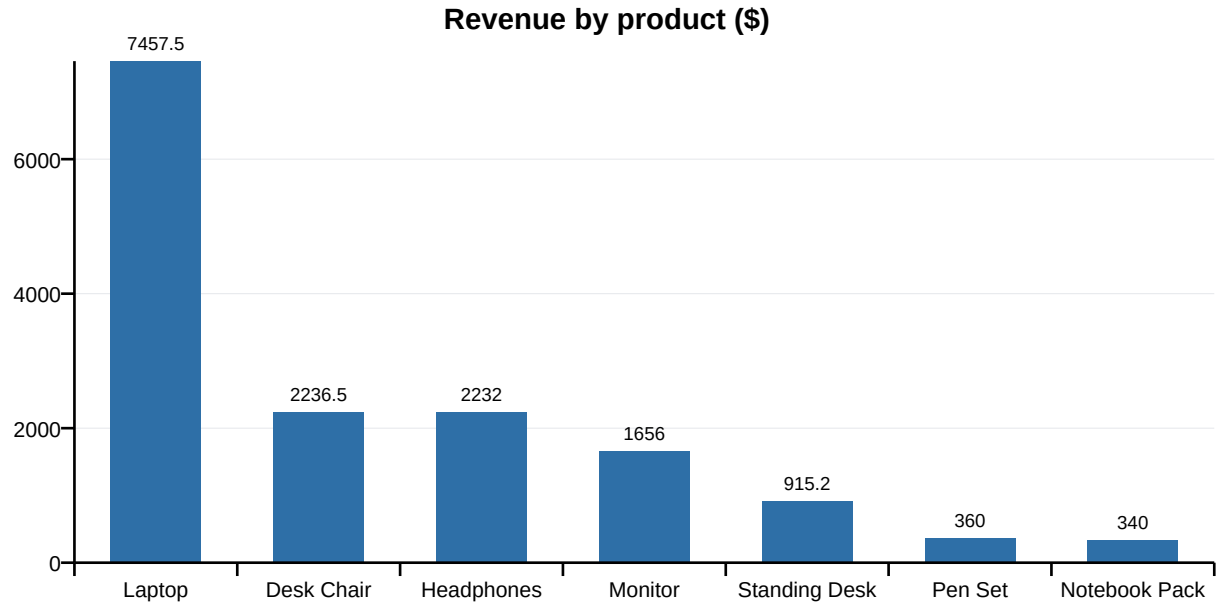
Electronics has the highest average customer rating (4.34) and the highest revenue, despite moderate unit volume — a healthy, high-value product line.

Monthly revenue trend



Revenue peaked in February ($7,321) then dropped sharply in March ($3,249) — roughly half the January level. With only 10 orders total, this is too little data to call a trend, but it's worth watching whether March's dip continues.

Top products



Laptop alone accounts for $7,457.50 — 49% of all revenue from just 2 orders. Desk Chair and Headphones are close behind as the next-strongest performers.

Discount and rating

Product	Discount %	Rating
Laptop (no discount)	0%	4.6
Desk Chair (no discount)	0%	3.8
Monitor	8%	4.7
Headphones	20%	3.9
Notebook Pack	15%	3.5

Heavier discounts line up with lower ratings

The two highest-discount orders (Headphones at 20%, Notebook Pack at 15%) have the lowest or near-lowest customer ratings (3.9 and 3.5). This is a pattern worth testing with more data, not a proven cause — discounting itself doesn't lower satisfaction, but it may correlate with lower-margin, lower-attention SKUs.

Next steps

1. Investigate the March revenue drop — check if it's seasonal, a sales-cycle gap, or data incompleteness.
2. Protect Laptop and Desk Chair margins; both sell well with zero discount and high ratings.
3. Review discounting policy on Headphones and Notebook Pack given the lower ratings at high discount levels.

Data limits

This dataset has only 10 orders. Regional, monthly, and discount patterns are directional, not statistically robust — treat them as hypotheses to test against a larger sample.
